

“The Future of Work: The Role of Artificial Intelligence and Automation”

The Work of Humans

Machines are now smarter.
Cellphones, television, cars,
and even watches have
artificial intelligence.
The automation from these
devices is astounding! Will
humans work in the future?
Look at it this way.
Robots are replacing
people's jobs already.
What can humans do?
There is one simple answer.
Humans must continue living.
Artificial intelligence and
automation are a part of
technology. Eventually,
technology breaks down.
A human came up with
artificial intelligence. A human
came up with automation.
If any of these things
stops functioning, a human
will fix it. The future of work
can only continue with
the work of humans. As long as
society remembers the value of
humanity, artificial intelligence and
automation will forever thrive.
